

Data Wrangling with R

1. Installing packages

We first install tidyverse that will enable us to perform some data wrangling operations

```
install.packages("tidyverse")
```

Install tidyverse packages in Rstudio Notebook

```
## Installing package into '/cloud/lib/x86_64-pc-linux-gnu-library/4.2'  
## (as 'lib' is unspecified)
```

```
install.packages("magrittr")
```

```
## Installing package into '/cloud/lib/x86_64-pc-linux-gnu-library/4.2'  
## (as 'lib' is unspecified)
```

```
install.packages("dplyr")
```

```
## Installing package into '/cloud/lib/x86_64-pc-linux-gnu-library/4.2'  
## (as 'lib' is unspecified)
```

```
library(tidyverse)
```

Load libraries

```
## -- Attaching packages ----- tidyverse 1.3.2 --  
## v ggplot2 3.3.6      v purrr   0.3.5  
## v tibble  3.1.8      v dplyr  1.0.10  
## v tidyr   1.2.1      v stringr 1.4.1  
## v readr   2.1.3      v forcats 0.5.2  
## -- Conflicts ----- tidyverse_conflicts() --  
## x dplyr::filter() masks stats::filter()  
## x dplyr::lag()    masks stats::lag()
```

```
library(magrittr)
```

```
##  
## Attaching package: 'magrittr'  
##  
## The following object is masked from 'package:purrr':  
##  
##   set_names  
##  
## The following object is masked from 'package:tidyr':  
##  
##   extract
```

```
library(dplyr)
```

2. Data Importation

We need to import the dataset to perform some analysis on the data.

```
df = read.csv("https://bit.ly/2ZlpzjF")
df
```

##	customerID	GENDER	SeniorCitizen	PARTNER	Dependents	tenure	PhoneService

## 4759	Bank transfer (automatic)	19.70	1051.90	No

```
## 4760      Electronic check      78.95      78.95      Yes
## 4761      Electronic check      75.10      5013.00     No
## [ reached 'max' / getOption("max.print") -- omitted 2289 rows ]
```

3. Data Standardization

We need to make sure the data is standardized for use i.e. Make all columns lowercase and remove any trailing white spaces

```
names(df) <- tolower(names(df))
names(df) <- trimws(names(df))
```

```
## [1] FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE
## [13] FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE FALSE
```

```
names(df)
```

```
## [1] "customerid"      "gender"           "seniorcitizen"    "partner"
## [5] "dependents"      "tenure"           "phoneservice"     "multiplelines"
## [9] "internetservice" "onlinesecurity"   "onlinebackup"     "deviceprotection"
## [13] "techsupport"     "streamingtv"      "streamingmovies"  "contract"
## [17] "paperlessbilling" "paymentmethod"    "monthlycharges"   "totalcharges"
## [21] "churn"
```

4. Remove duplicates

We identify and remove duplicates that may lead to inaccurate and misleading analyses.

```
df <- unique(df)
df[duplicated(df), ]
```

```
## [1] customerid      gender           seniorcitizen    partner
## [5] dependents      tenure          phoneservice     multiplelines
## [9] internetservice  onlinesecurity  onlinebackup     deviceprotection
## [13] techsupport     streamingtv     streamingmovies  contract
## [17] paperlessbilling paymentmethod    monthlycharges   totalcharges
## [21] churn
## <0 rows> (or 0-length row.names)
```

5. Missing Data

We need to identify missing data and check if it's significant to our analysis or we can drop them. ####
Identify missing data

```
is.na(df)
```

```
##      customerid gender seniorcitizen partner dependents tenure phoneservice
## 1      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 2      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 3      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 4      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 5      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 6      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 7      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 8      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 9      FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 10     FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
## 11     FALSE FALSE           FALSE  FALSE      FALSE  FALSE      FALSE
```

```

Drop missing data From the analysis above we have determined that the missing data is negligible relative to the entire dataset so we can drop them.

6. Data Analysis

We need to come with strategy for customer retention therefore we need the data to tell us why there are some customers leaving.

Hypotheses

Are the services too expensive?

Is it because the contract is monthly?

Is it because the customer does not have tech support and therefore when they have issues they do not get expert assistance resulting in a poor customer experience?

Are the services too expensive? We need to find if the average total cost for retained and churned.

```
df %>%
  group_by(churn) %>%
  summarize(totalchargesmean = mean(totalcharges))
```

```
## # A tibble: 2 x 2
##   churn totalchargesmean
##   <chr>          <dbl>
## 1 No             2569.
## 2 Yes            13021.
```

From the analysis churn customers on average spent **13,014.21** compared to retained who spent an average of **2,517.37**. It is therefore evident that the one of the reasons for churn is the total cost.

Is it because the contract is monthly? We also need to find out if most of the churn customers are the month to month contract or those on yearly contracts

```
df %>%
  group_by(contract, churn) %>%
  summarise(n = n())
```

```
## `summarise()` has grouped output by 'contract'. You can override using the
## `.groups` argument.
```

```
## # A tibble: 6 x 3
## # Groups:   contract [3]
##   contract      churn      n
##   <chr>        <chr> <int>
## 1 Month-to-month No      2213
## 2 Month-to-month Yes     1651
## 3 One year      No      1304
## 4 One year      Yes       166
## 5 Two year      No      1634
## 6 Two year      Yes        47
```

Month-to-month contract. customers have the highest churn at **1,652**. One year contract customers have the second highest churn at **166**. Two year contract customers have the least churn at 47 customers. From the analysis there is reason to believe that long term customers are more likely to stay as compared to short term customers.

Is it because the customer does not have tech support and therefore when they have issues they do not get expert assistance resulting in a poor customer experience? We need to find out if those customers without a tech support have a higher churn than those with tech support.

```
df %>%
  filter(churn == 'Yes') %>%
```

```
group_by(techsupport, churn) %>%  
summarise(n = n())
```

```
## `summarise()` has grouped output by 'techsupport'. You can override using the  
## `.groups` argument.
```

```
## # A tibble: 3 x 3  
## # Groups:   techsupport [3]  
##   techsupport    churn      n  
##   <chr>         <chr> <int>  
## 1 No          Yes    1443  
## 2 No internet service Yes    113  
## 3 Yes        Yes    308
```

The customers without tech support had the highest churn at **1,444**. Those with tech support had **308**. From the analysis it is also clear that the highest churn came from those customers that did not have tech support.

7. Conclusion and Recommendations

From the analysis done below are the recommendations:

1. It is apparent that cost was one of the main reasons why some customers left. We need to do a further
2. It is also clear that short term customers are more likely to leave than long term customers. Therefore
3. It is also clear that those customers without tech support were more likely to leave. We can offer a
